

Outcome Goals: 2023

FFPC Addresses These UN Sustainable Development Goals:

Food Security

School Feeding Program

Mid-term Goal

By 2025, increase the number of youths that have daily access to sufficient and nutritious food year-round by 50% across all schools where we facilitate regular feeding programs. These meals are of high nutritional value, and would include cornmeal porridge, vegetable soup and protein such as sausage, beef and mackerel.

Long-term Goal

By 2030, increase the number of youths that have daily access to sufficient and nutritious food year-round by 75% across all schools where we facilitate regular feeding programs. These meals are of high nutritional value, and would include cornmeal porridge, vegetable soup and protein such as sausage, beef and mackerel.

Education

Scholarships

Mid-term Goal

By 2025, increase the number of youths that achieve literacy and numeracy by 25% in the communities we serve. We do this by enhancing access to quality early childhood and primary education through providing youth with scholarships that cover school fees, uniforms, and educational supplies.

Long-term Goal

By 2030, increase the number of youths that achieve literacy and numeracy by 40% in the communities we serve. We do this by enhancing access to quality early childhood and primary education through providing youth with scholarships that cover school fees, uniforms, and educational supplies.

Health

San Antonio Healthcare Centre

Mid-term Goal

By 2025, increase the coverage of essential healthcare services and affordable medicines for the residents of San Antonio, Honduras, by 50%. Healthcare services include the most common medical concerns such as skin ailments, colds and fevers, joint aches and pains, respiratory issues, and malnutrition.

Long-term Goal

By 2030, increase the coverage of essential healthcare services and affordable medicines for the residents of San Antonio, Honduras, by 80%. Healthcare services include the most common medical concerns such as skin ailments, colds and fevers, joint aches and pains, respiratory issues, and malnutrition.

Livelihood

Coffee Farming Program with COMBRIFOL Cooperative

Mid-term Goal

Increase the coffee yields of 13 low-income Honduran farmers by 100% by the time they exit the three-year program in 2025. The program aims to achieve this through providing farmers with adequate technical assistance and training on the use of organic fertilizers, agro-ecological management of crops, and conservation techniques

Long-term Goal

By 2030 (5 years post-program), increase the average seasonal income of these 13 farmers by 200% as a result of coffee production. The program aims to achieve this through providing farmers with adequate technical assistance and training on the use of organic fertilizers, agro-ecological management of crops, and sustainable conservation techniques farmers will use well after their participation in the program.

Housing

Mid-term Goal

By 2025, achieve an 80% or higher satisfaction rate among residents of all 66 houses built since 2020. The reported level of satisfaction takes into consideration safety, security, durability and comfortability.

Long-term Goal

By 2030, maintain a 90% or higher satisfaction rate among residents of all houses built since 2020. The reported level of satisfaction takes into consideration safety, security, durability and comfortability.
